The following is the completed circuit diagrams for the SD2000. These are correct as we have tested the circuits and found them to be so. The full PDF is available in the download section to registered users you must be logged in to see the download which is in the Technical Section.

The pictures are reduced for the website so quality is quite bad. However the PDF is very good. Before I go on with a these files are owned by myself and Cortana Zed and as such are our property.

THEREFORE WE DO NOT GIVE PERMISSION TO PUBLICLY DISPLAY ON ANY OTHER WEBSITE OR BLOGG OUTSIDE OF MINELABMODS & GEOTECH

Also all of these circuits have been verified and are from a lot of painfull work of reverse engineering and snippets of information for the IC's over the last 4 years. I hope that you give Cortana a big hand for he is the poor sod that did most of it!!!

With that out of the way here they are:

These are the sample timings for the receive with the Transmit signal as a reference

This is the 2 PCB's with discriptions of the areas for those interested.

Hope you enjoy....
